Yes. We have a table of maximum hit by well. I will send it to you. On the train right now. We don't have a table of most current data, the table is maximum values for all data collected. Give me about 30 minutes.

I don't need spatial right now. I'd just like to know if "john doe" is drinking what contaminants that exceed some reference number.

Rich,
 We have not spatially correlated the data yet. That will take some time but it needs to be done by contaminant in my opinion. This will give an idea of whether we should be more broadly concerned about the aquifer and unsampled wells.

Bob, same question to you guys. Did you or Atlanta compile the data by resident?

Thanks. Very much appreciated.

Probably another stupid question, but did you guys ever prepare a summary (by resident) of the Cabot and Padeep data, focusing on where there are exceedances?

Rich- The real- GIS map is on your OSC page. loaded by Jim Bennett for me.... This one was modified from Jim's original to put in a HQ presentation and ATSDR used it for their report. The one on your OSC site has names of both the residents and Cabot gas wells. Jim can give you or your contractor a hand with the other map if you need it..

Subject: Dimock Site Map

Karen,

I understand that the map used in the ATSDR AROA (attached) came from you guys. What is the source (i.e. Cabot, PADEP, etc.)? We are trying to work on the issue of how large the size of the "site". This is a good map to start with as a reference. Unless its already done, I'd like our contractor to put it into standard GIS format.

Let me know what you know, so we move out from there.

thanks.

Rich
